Create Node-RED Service

The screenshot displays the IBM Cloud console for a Node-RED service named "Node RED DNZFS 2022-11-09". The service is in a "Running" state. The left sidebar contains navigation links: Getting started, Overview (selected), Runtime, Connections, Logs, API Management, and Autoscaling. The main content area shows the "Overview" tab with a notification about IBM Cloud Foundry Public being deprecated. Key metrics include: Health at 100% (1/1 instance(s) are running), MB memory per instance set to 256 (with a slider from 0 to 2048), Runtime cost at \$0.00, and a single connection named "node-red-dnzfs-2022--cloudant-1668016277847-13324". A "Runtime" section shows a donut chart for Node.js memory allocation, with 256 MB total allocation and 1.75 GB still available.

The screenshot shows the Node-RED web interface in a browser. The top bar includes a "Deploy" button and a user profile icon. The left sidebar has a "filter nodes" search bar and two categories of nodes: "common" (inject, debug, complete, catch, status, link in, link call, link out, comment) and "function" (function, switch, change, range). The central workspace, titled "Flow 1", contains a simple flow with an "inject" node connected to a "msg.payload" node. The right sidebar shows the "Info" panel with a search bar and a list of flows, including "Flow 1". A message at the bottom of the right sidebar states: "Pressing enter will edit the first node in the current selection".
